

Cyber security

End-to-end security services ensuring confidentiality and data integrity in challenging environments

Your data, our priority

In an increasingly connected world, safeguarding data and resources within embedded systems is paramount. Our team specializes in comprehensive security solutions, ensuring data confidentiality, integrity, secure communication, and robust authentication. We conduct exhaustive vulnerability assessments and penetration testing to mitigate risks. MiraFra is your trusted partner, providing end-to-end security services for embedded systems, offering peace of mind in a dynamic digital landscape.

Pen testing

The industries that build the products for Healthcare, Government organizations, banking and finance, payment gateways (Credit/Debit card, Paytm, Gpay., etc), Educational, manufacturing, IOT based, cloud based have to double ensure the security of their user data by implementing and monitoring the firewalls, test their router configurations and the ports accessibility also needs to validate the logs these applications will generate, there may be need to perform proper code reviews through proper code scanners.

Nowadays the role of an ethical hacker is gaining more importance in the industry, any engineer who wants to become an ethical hacker should have a very good understanding of computer networking and should have attained certifications like CEH and OSCP.

Key features

We specialize in hardware services to create cutting-edge technology products. Our semiconductor services include

End-to-end security

Comprehensive security solutions covering the entire development cycle, from initial design to penetration testing

Data confidentiality

Ensuring the protection of sensitive information within embedded systems

Data integrity

Maintaining the accuracy and reliability of data throughout its lifecycle

Secure communication

Establishing robust protocols for the safe exchange of information
