

Case Study : Web-based interface to follow the process of approval (ViewSpec)

Business Challenge

- It was a handshake specification document requiring approvals from multiple stake holders. Approval status was captured in a database for each Camino version and manually updated in the excel when required

Requirement

- To build a web-based interface to follow the process of approval to view spec.

Technology & Tools

- Backend - [Python, GraphQL, MySQL],
- Frontend - [Vue JS]

Value add by Mirafra

- Multiple bug-fixed were performed to make the application stable as per requirements
- Eliminated the manual process in access management
