

# Failure Prediction in Semiconductor Manufacturing

- ❖ Finds critical parameters that have high impact on failure
- ❖ Identify the value range for critical parameters for real-time monitoring in production
- ❖ Finds critical conditions that lead to failure

- Logistic Regression
- Support Vector Machine
- Association Rule Mining
- Apriori Algorithm

# Home Credit Default Risk Prediction

- ❖ Evaluate credit risk for new customers who do not have credit history with the bank
- ❖ Ensure customers capable of repayment are not rejected

Default with respect to days employed

## Tools and Technology

- Python (NumPy, Pandas, scikit-learn )
- Seaborn, Matplotlib

## Algorithms

- Light Gradient Boosting
- Regularization(L1 & L2)

## Model Performance (in %)

# Wine Quality Prediction Using Sensor Data

## Overview

- ❖ Predict quality of wine rated 1 to 10
- ❖ Converted quality rating to binary class good (1) or bad(0)

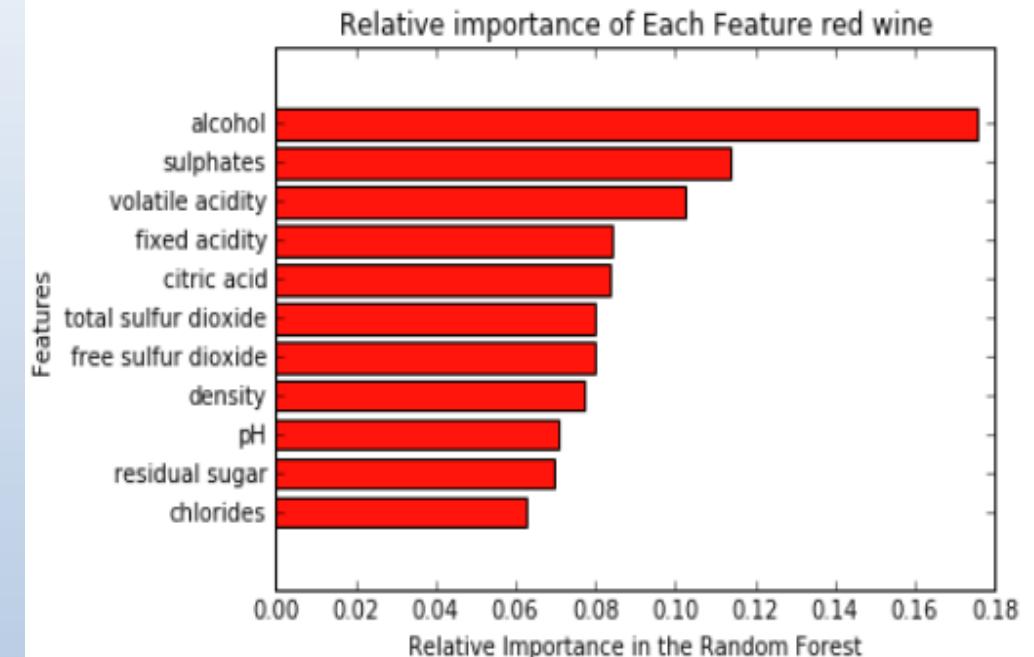

## Red Wine : Performance of different classifiers

Models	Precision	Recall	F1 Score	Accuracy
Random forest	0.80	0.80	0.80	0.79
SVM	0.69	0.69	0.69	0.69
Logistic regression	0.75	0.75	0.75	0.75

## White Wine : Performance of different classifiers

Models	Precision	Recall	F1 Score	Accuracy
Random forest	0.81	0.81	0.86	0.81
SVM	0.74	0.75	0.75	0.74
Logistic regression	0.74	0.75	0.73	0.74
